ABSTRACT

A device for determining the concentration of heparin in a fluid sample comprising: a container for holding the fluid sample; a container for holding the dye solution; a mixer for mixing the fluid sample and the dye solution; an illumination source for illuminating a mixture comprising the fluid sample and the dye solution with electromagnetic radiation having a substantially continuous range of wavelengths in the visible range; a detector for detecting the absorption spectrum of the mixture within the substantially continuous range of wavelengths; a recorder for recording the absorption spectrum of the mixture within the substantially continuous range of wavelengths; and a calculator for calculating a spectral parameter.
